

Arthropodium cirratum 'Matapouri Bay'

Height: 90cm
Spread: 90cm

FEATURES:

- Very hardy and water wise with lush, evergreen foliage.
- Flowers, even in deep shade.
- Suited to difficult dry and/or shady areas.
- Billowy white floral stems from spring to summer.

SUGGESTED USES:

- Mass plant for low maintenance areas.
- Suitable for coastal regions.
- Edging for paths, drives or retaining walls.
- Provides a lush effect around water features and poolside landscaping.

CULTURAL CARE

Very dry tolerant once established. Low maintenance with no pruning generally required other than to tidy. Feed in spring with a general fertiliser. Protect from snails which can cause minor damage. Protect from heavy frost. Mulching is advisable to further reduce long term maintenance.

Commonly known as 'Renga Renga Lily'. It is an ideal solution for dry, shaded sites on slopes or beneath trees - in fact most places that are a challenge may be overcome with this attractive and tough contender. Mass plant in difficult sites or create a bright habitat in low light areas using just green, silver and whites by pairing up with other shade loving ornamentals such as Ajuga 'Chocolate Chip', Iberis 'Winter Glow', Lamium 'Snow and Frost' and winter flowering Hellebore 'Penny's Pink'.
