

Lampranthus hybrid PINK EXPLOSION

Height 40cm
Spread 80cm

FULL SUN

DRY TOLERANT

GROUND COVER

CONTAINER

ATTRACTIVE FOLIAGE

COASTAL

MIXED BORDERS

POLLINATOR FRIENDLY

FEATURES:

- Easy care plant for summer displays.
- Vibrant pink coloured flowers stud foliage in profusion from late spring into summer with spot flowering over remainder of year.
- Succulent foliage forms a low growing mound.
- Hardy, easy to grow and very dry tolerant once established.

SUGGESTED USES:

- Mass plant difficult sites as a fast growing, low maintenance ground cover.
- Contemporary gardens, mixed perennial borders or cascading over walls and embankments.
- Containers or general garden use.

CULTURAL CARE

Grows well in most soil types which are well draining and in a sunny location. Do not over water. No pruning generally required. An application of slow release fertiliser during spring would be beneficial to overall performance.

The genus *Lampranthus* contains around 155 species - mostly native to regions of southern Africa. The genus name translates from the Greek words *lampros* - bright and *anthos* - flower. This species forms a low growing mat of succulent foliage and makes an easy-care plant for summer borders. For a sunny, ornamental 'curtain' of colour to trail over walls and embankments - try mixing with companions such as Sedums PURPLE BLOB and SILVER BLOB along with ground covering Convolvulus 'Moroccan Beauty' and dotted along with Santonlina 'Little Silver' for highlights.
